

ENDLESS RECYCLING POSSIBILITIES

PET bottles relieve the environment through its lightness. Compared to heavier packagings, less fuel is needed on the way to the bottler and consumer thus reducing CO₂. In addition to its low weight, PET bottles stand out as a break and fall-proof companion in our everyday lives.

After living as a packaging for drinks, PET is ideally suited for a second or even third life due to its recyclability. For example, PET can be recycled any number of times and can be found later in bottles or other products (e. g. textiles).

PET-Verpackungen GmbH Deutschland is constantly working for the ecological optimization of PET bottles and the recycling of the raw material PET by high quality recycling in Germany.

RESOURCE-EFFICIENT PACKAGING

The recycling rate of PET bottles produced in Germany exceeded 93 % in 2017. More than 97 % of the PET one-way bottles with a deposit were brought to material recycling thus being a prime example for a functioning material cycle.

PET-Verpackungen GmbH Deutschland give used PET bottles a second life. We focus on sustainability and use recycling material that is made from old PET bottles. Our technology already offers the possibility to produce PET preforms and PET bottles with up to 100 % recycling material.
