

A hand-drawn illustration on a textured paper background. In the center is a solid green wine bottle. Behind the bottle is a globe with horizontal hatching. Surrounding the globe are various environmental icons: a sun, clouds, solar panels, wind turbines, trees, a bicycle, a butterfly, and flowers. The text 'THE GREENER WINE BOTTLE' is written in a bold, black, textured font across the middle of the bottle.

**THE GREENER
WINE BOTTLE**

OUR MISSION IS A WINE BOTTLE THAT CAN DO IT BETTER!

The result: **Eco2Bottle**. The climate-neutral wine bottle.

The wine bottle which reduced its CO₂ footprint to a minimum. Due to an extremely high percentage of used glass, the reduced weight of the bottle, the optimised transport packaging and the use of eco-power, we are able to effectively reduce emission by more than 30% compared to that of a standard wine bottle.¹ What we are currently not able to avoid or to reduce, we compensate by investments in preferred regional climate protection projects.

We think sustainability beyond the bottle neck. 30% less emissions + climate neutral.

1) According to the comparative calculation of our partner ClimatePartner between the Eco2Bottle and the standard wine bottle, which represents the average of all 0.75 l. Bordeaux bottles from the Wiegand-Glashüttenwerke GmbH product range.

WITH **ECO2BOTTLE** THE WINE GETS REALLY SUSTAINABLE!

Our **Eco2Bottle** closes the circle of a sustainable wine economy – from the vineyard to the transport to the POS. It significantly improves the CO₂ balance of a wine once again thus being the perfect choice for any winegrower who wishes to reduce his own CO₂ footprint. This also applies to consumers who value sustainability not only in the wine itself, but also in its packaging.

**HIGH PERCENTAGE OF
USED GLASS BETWEEN
92.5% AND 98%**

Our bottle is made from 92.5% to 98% green cullet. According to BV Glas, the average amount of cullet used in Germany is approx. 60%. This means that we save 11.4% energy and 13.3% CO₂ compared to an average bottle only due to the very high recycling input.

SEVERELY REDUCED WEIGHT

By changing the construction, we were able to reduce the weight significantly. Consistent quality despite minimal thickness of the walls is ensured due to our innovative production and control techniques. Eventually, we shall keep reducing the weight even further. Compared to the average weight of our 0.75 l wine bottles produced in 2019, the **Eco2Bottle** is 15.7% lighter.

OPTIMAL UTILISATION OF CARGO SPACE

Due to the reduced weight, we are able to achieve a higher packing density in the trucks. We load up to 2.9 meters, thus utilising the cargo hold more efficiently. All components of the pallets, such as films, cardboard packaging and intermediate layers are produced environmentally friendly. After their usage, the pallets and intermediate layers are not just discarded, but repeatedly reused. For example, the intermediate layers are in the pallet cycle for seven years, having completed approx. 30 cycles at the end of their shelf life.

100% ECO POWER

In production, we rely on power from renewable energy sources. With the purchase of certified eco electro-power from high quality sources, we warrant that the power supplier has produced this quantity of green energy.

CO₂

CLIMATE-NEUTRAL GAS CONSUMPTION

With our investments in preferred regional climate and nature conservation projects, we compensate for the emissions caused by burning natural gas in the production process. We hereby warrant that the generated CO₂ value is fully compensated.

The Greener Glass

COMMUNICATION CLEAR AS GLASS

Filling the **Eco2Bottle**, winegrowers benefit also from the strong brand character. The glass-clear bottle's identity allows the consumer to orientate himself on store shelves and indicates immediately that this is a sustainable product.

Eco2Bottle-WEBSITE

On our website, the consumer can find detailed information about the bottle and the measures how to reduce CO₂.

www.eco2bottle.com

EMBOSSSED Eco2Bottle LOGO

The **Eco2Bottle** logo is embossed on three sides of the bottle and gives the consumer a clear orientation at first glance.

Eco2Bottle SEAL

The **Eco2Bottle** seal provides additional information, which every wine producer can integrate on the back label when using the bottle.
